About

I am a creative UI/UX Designer and a front-end engineer who has proven ability to seed ideas, design intuitive and accessible interfaces for it to meet users' needs, and transfer them into functional code for your applications. With a certification in UI/UX design and a few mock projects in my arsenal, I have what it takes to understand people and draw reliable software solutions.

Key Projects

- **Tupike**

Tupike is a portfolio project designed for dietitians to share quality meals recipe and food articles. The flow can be found in my portfolio website.

- **KeNHA Inspectors Daily Reporting App.**

This project was conceived when I was in my internship at KeNHA. The application was meant to assist in reducing paper usage in the organization. It is to be used by inspectors to report the daily work done on road projects.

- **Reserver App**

This is a simple web flow for reserving seats in a movie theater. It was part of my UI/UX certification projects.
